

Amendments to the Specification:

Please replace paragraph [0032] with the following amended paragraph:

[0032] At the underside of the deck plate 5 extends a stiff element or transmission member 87, which, in the example shown, comprises a rod 88 provided with a pneumatic cylinder 89. The rod 88 can also comprise the piston rod of the pneumatic cylinder. Adjacent the rotation axis 82, the rod 88 is pivotably connected with the lip 6, as indicated at 881, and adjacent the extension hinge construction 7 it is pivotably connected with the platform 3, as indicated at 71. The rod 88 and the deck plate 5 constitute a so-called parallelogram construction, vertices of which are defined by the pivot axes of rotation indicated at 7, 71, 82 and 881, by which the rotation of the deck plate 5 and the lip 6 are coupled to each other. In the example shown, the lip and the deck plate are then coupled in such a manner that the lip upper surface, independently of the position of the deck upper surface 51, is at a substantially constant small angle with the horizontal plane.
